Problem Statement & Problem Description

PROBLEM STATEMENT:

LIMITED ACCESS TO QUALITY HEALTHCARE AND DELAYED DIAGNOSIS AFFECTS PATIENT

OUTCOMES, ESPECIALLY IN RURAL AND REMOTE AREAS.

Proble Description:

- Long hospital waiting times
- Shortage of doctors in rural areas
- Lack of continuous patient monitorin
- High consultation costs

Identify Issues and Flaws in Current Flow Issues in Current Healtheare System:

- Manual diagnosis takes time
- Physical hospital visits required
- Poor access to specialists
- Limited early disease detection
- No 24/7 medical support
- Lack of digital health records

Proposed Solution and Cure for the Problem

Proposed Solution:

- An AI-powered Telehealth platform that provides:
- Online consultation with doctors
- AI-based health risk prediction
- AI-based health risk prediction

Cure:

Early diagnosis + Instant consultation = Better patient outcomes

Artificial Intelligence

Product Description (What We Are Going to Build)

Product Name:

"AI CONSULTANCY"

A web/mobile-based application where patients can:

Enter symptoms

Get AI-based disease prediction by scanning the face

Consult doctors online

Store health records

Get personalized health suggestions

Tech Stack

Fronten:

- HTML, CSS, JavaScript
- Bootstrap / React (Optional)

Backend:

- Python Flask

AI / ML:

- NLP for symptom analysis

Database:

- MySQL / SQLite / MongoDB

Artificial Intelligence

Key Features and Limitations

Key Features:

- AI symptom checker
- Online consultation
- Virtual health assistant chatbot

Limitations:

- AI predictions are not 100% accurate
- Limited to trained datasets
- Requires internet connection

BUSINESS MODULE:

- Subscription model for hospitals & clinics
- Pay-per-consultation for patients
- SaaS licensing for healthcare institutions
- Government & NGO partnerships
